Exail achieves key milestone in Finland's Squadron 2020 program

Kongsberg, Norway, 25/03/2025 – Exail has successfully delivered critical navigation equipment to the Finnish Navy, marking a major step forward in the Squadron 2020 program. The delivery includes multiple Marins M3 inertial navigation systems (INS) and shockmount protection systems, essential for Finland's new Pohjanmaa-class corvettes.

Enhancing Finnish Navy's capabilities with redundant inertial architecture

This delivery marks a significant milestone in modernizing the Finnish Navy's fleet, enhancing its operational effectiveness in the strategically vital Baltic Sea region. The Marins M3 systems will equip the corvettes with cutting-edge navigation technology, ensuring precise positioning and orientation even in environments where GNSS signals may be disrupted. Each corvette will be fitted with Marins M3 and Phins systems, creating a uniquely redundant inertial architecture that maximizes reliability and resilience, essential for complex naval operations. The shock-mounted protection further ensures these systems withstand high-impact shocks, maintaining uninterrupted performance under demanding conditions.

Exail's commitment to supporting modern naval operations

"We are proud to have reached this milestone with the successful delivery of our advanced navigation systems to the Finnish Navy," said Régis Blomme, Sales Director at Exail. "This achievement underscores our commitment to supporting critical defense programs and highlights our ability to meet the stringent demands of modern naval operations. Our systems are engineered to deliver unparalleled accuracy and reliability, allowing the Finnish Navy to operate with confidence in any environment."

Strengthening Finland's naval defense for the future

The Squadron 2020 program, which involves the construction of four Pohjanmaa-class multi-role corvettes, represents a transformative upgrade for Finland's naval defense. With Exail's advanced navigation solutions onboard, these vessels will play a crucial role in securing Finland's maritime interests and reinforcing regional stability.

This success further reinforces Exail's growing presence in the naval sector worldwide, solidifying the company's reputation as a trusted partner in advanced defense technologies.

About Exail

Exail is a leading high-tech industrial company specializing in cutting-edge robotics, maritime, navigation, aerospace and photonics technologies. With a strong entrepreneurial culture, Exail delivers unrivaled performance, reliability and safety to its civil and defense clients operating in severe environments. From the deep sea to outer space, Exail expands their capabilities with a full range of robust in-house manufactured components, products and systems. Employing a workforce of 2000 people worldwide, the company benefits from a global footprint and conducts

its business in over 80 countries. Exail was formed by ECA Group and iXblue joining forces in 2022. It is a subsidiary of Exail Technologies, a family-owned company specialized in high-technology.
